Project Profile

Environmental, Safety and Health Support for Physician Offices

Soaring Eagle Safety Consultants began their involvement in Physician Office programs in 2000, providing custom programs to support the health and safety of physicians along with their medical and support staff. Custom programs tend to require a great deal of effort and, as a result, they tend to be expensive. Canned programs are cheaper but require a great deal of time and effort from the medical office staff. Many Physician Offices do not have the time or money to develop and maintain a comprehensive safety program.

In 2007, Soaring Eagle Safety Consultants partnered with OSHAGUARD. OSHAGUARD is a provider of a quality canned safety and health program for physicians. Soaring Eagle uses the OSHAGUARD program as a template and then provides custom modifications. This provides a high quality office specific program, at a lower cost comparable to an off the shelf product, with less total physician staff effort.

Practice Manager praised the combination of ease and thoroughness of the system.
